

# Technology That Works For You

BY DIANE FEEN

We have smart smart phones, smart TVs and smart cars. Our gadgets for the home get smarter every year – they also get more complicated. Despite that, technology has been the spark that lights up our lives and makes it easier. But not always.

If you have installed a video or audio system you know it can be daunting. If you have five remote control devices on your coffee table, you have experienced remote confusion.

But it doesn't have to be like that anymore. That's because Audio Command Systems will make your smart technology blend in seamlessly with your life. They will make it easy to use so you can take control of it, not the other way around.

ACS specializes in Custom Home Automation for every area of your home. They started in New York and expanded to Los Angeles and South Florida.

Their goal is to make state-of-the-art technology relatively simple to use. "We listen to our clients and design systems that cater to their lifestyle needs. Our smart systems are easy to use, and we hire only top-level technology experts.

They have excellent customer support, and design and install a wide range of systems for varying needs and budgets."

They will design easy-to-use systems for almost every area of your home - inside and out. This includes: Lighting Control, Motorized Window Shades, Surveillance Systems, Network Systems, House Au-

dio Systems, Landscape Audio Systems, Landscape Lighting, Exterior Motorized Screen Systems, Home Theaters and Media Rooms.

Home Control and Automation - With one user-friendly device you can operate the entertainment system, lights, thermostats, shades and more.

If your coffee table has six remote controls and you can't figure out which one turns the television on, ACS has the solution. Their Intelligent Home control devices puts an end to remote overload.

Lighting Control lets you go green (and saves money) by installing new fixtures, or replacing existing lights, with an energy efficient design.

Custom designed lighting allows you to change the mood of any area of your home. Whether you are watching TV, dining or entertaining, all you have to do is press a button to create the ideal atmosphere.

Motorized Shading Systems are perfect for Windows in your home. You can control the light – from daytime glare and heat - to nighttime mood lighting easily.

Motorized shade and drape tracks transform harsh glare and ensure privacy while preserving your view of the outdoors. It reduces heat, provides UV protection for expensive furnishings and

artwork, and allows you to change your lighting any time of the day. They have hundreds of window treatment fabric and color options to compliment your décor.

Network Systems are your home's central nervous system. ACS puts down a solid and reliable foundation for all your present and future technology needs.

Home Video Systems - Video distribution and streaming services (Hulu, Netflix, Amazon Prime, Disney, YouTube TV) are in most homes today. Whether you want to use your local provider, or you are ready to "cut the cord" and utilize streaming devices only, ACS can help you set up your systems to get the optimal entertainment.

House Audio Systems -Audio systems send music to any room in your home or office via a central music server. Control of your music and play-lists is easy with a touch panel, keypad, handheld RF remote, iPad or Smart phone.

The speakers can go in walls, ceilings, or by the pool – depending on where you want them.

Home Theater - A private cinema should be designed and engineered to provide maximum movie and music enjoyment.

Special acoustic treatment isolates the room from outside noise. Speaker placement optimizes the audio, and plush theatre seating is carefully positioned for unobstructed viewing on our big screen. Room lighting is controlled to ensure the best picture from a high definition projector.

Landscape Lighting not only enriches the beauty of your home at night, but also helps with home security. ACS carefully designs the lights to shine on every area of your landscape. Landscape lighting has an amazing impact on the beauty of your home and is one of the most popular requests.

Surveillance Systems - With cameras around your home, you can monitor activities whether your home or out of the country. A Network Video Recorder will record what is going at all times in your home.

This system can alert you via email if something suspicious is going on, and cameras provide clear images and footage. "We can place cameras to patrol any movement around your home."

These systems are effective in securing your property from criminal activity.

Remote Monitoring - ACS can receive alerts for equipment malfunctions, diagnose issues, and repair problems remotely.

Each monitoring and support system solution is built specifically for your home. ACS can receive an alert immediately and remedy the problem remotely.

HVAC Control - Keeping your home cool in Florida is imperative. That's why you need dependable air conditioning and heating systems. Automated climate control adjusts the temperature of your hot tub and pool and each room of your home. Automated climate conserves energy all day long.

Media Rooms - Some of the most exhilarating surround sound rooms are not Movie rooms - they're Living Rooms, Family Rooms, Master Bedrooms and outdoor Patios.

Almost any room in your home can be turned into a multi-purpose media room with the touch of a button. "We can create hidden screens and speakers that descend from ceilings, inside framed artwork, or rise from furniture."

Landscape Audio Systems - The tropical climate in South Florida gives homeowners the ability to use outdoor living spaces year-round. With the right design and cutting-edge products, ACS can add audio and video to your outdoor living space. The audio can be hidden in the landscape.

Call Audio Command Systems and they'll come to your home for a consultation at no charge.

Take your home to the next level of smart living.
